Ritchie, Fern J. Ritchie, 2001-03-01 We are in a power crunch and you need help It is not going to go away Fuel costs population increases or the need to reduce air pollution will all keep us in a power hungry situation Either we cannot afford it can no longer breathe it or there will not be enough The purpose of this book is to ease the problem Better start learning now

Experience is the best teacher but you need help before you can acquire experience on your own Next best is to benefit from another's experience This book collects the relevant material from most of the authors over 50 books They were written for people who want to help themselves Does that include you This book contains over 50 years of ways we have used to conserve energy We started early The message of energy shortages to come wasn't widely publicized although it's coming was announced and published in the 1950's We hope that rolling blackouts are the most with which we will have to cope In today's culture even that is a minor disaster Electricity is the hinge upon which our lives swing Most of us can't even tell time without electricity or when it comes back on how do we reset the clocks In fact every floating automatic device in the house will need resetting We depend upon electricity for all the niceties of living What about the necessities Food Preservation and Spoilage Heat Light both to see and for security Water No hot water without electricity City and Rural water is supplied by electric pumps Enjoy air conditioning A hot tub Hot water These are things we can live without if we must although there are energy efficient ways to have these things Otherwise either the cost of having them or the need to use a minimum of electricity may make them unavailable Solar Energy will heat your home and provide hot water It will even heat a hot tub We use what is in this book ALL the time

A Handbook for Small-Scale Densified Biomass Fuel Pellets Manufacturing for Local Markets, 1993-06 Prepared to help potential small scale manufacturers of densified biomass fuel with preliminary investment processing and local market decisions **The Carbon Buster's Home Energy Handbook** Godo

Stoyke, 2006-11-01 Most people are unaware that environmental problems such as climate change can be easily avoided at a profit through the intelligent application of appropriate technology The Carbon Buster's Home Energy Handbook describes how to achieve this goal in the residential field The first book in North America to provide a detailed carbon accounting of a family's carbon emissions and how to reduce them it systematically analyzes energy costs and evaluates which measures yield the highest returns for the environment and the pocketbook It provides answers to questions such as Which measure is more effective putting solar panels on your roof or buying a hybrid car Where do I need to invest first in high efficiency shower heads or solar tubes Is a 500 fridge that uses 800 kWh of power per year a good buy The book allows individuals to quickly and accurately assess which products are a good deal and which aren't It systematically analyzes residential carbon emissions and energy costs and prioritizes solutions based on highest carbon reductions and monetary returns yielding results that are often surprising The book enables readers to dramatically reduce their carbon emissions far below the levels targeted under the Kyoto Protocol At the same time readers implementing the recommendations will save an average of 15 000 in energy costs over the next five years Natural Home Heating Greg Pahl, 2003-09-01 Natural Home Heating is the first comprehensive guide to heating your home with renewable energy sources Greg Pahl offers a well organized easy to understand tour of all available home heating options including traditional oil and gas furnaces wood stoves and masonry heaters active and passive solar systems and heat pumps Included is everything you need to know about the fuels systems

technologies costs and advantages and disadvantages of each option Pahl teaches homeowners how to retrofit existing heating systems and choose renewable replacements or design an entirely new house that can be heated comfortably with minimal environmental and financial impact Consider 95% of American homes are heated with fossil fuels Oil and gas prices are up by more than 20% as supplies dwindle and sources become less reliable Home heating costs could double or even triple in the event of a fuel crisis The fossil fuel economy is unsustainable There are viable clean healthy and afford able home heating alternatives Learn how to burn environmentally friendly bio diesel fuels not just in your car but in your furnace Find out how a ground source heat pump works and why it can achieve 400% heating efficiency Discover what it takes to make burning wood truly sustainable Natural Home Heating explains all these details and more making it unique in the marketplace

Biofuels Handbook James G Speight,2015-10-09 Petroleum based fuels are well established products that

have served industry and consumers for more than one hundred years However petroleum once considered inexhaustible is now being depleted at a rapid rate As the amount of available petroleum decreases the need for alternative technologies to produce liquid fuels that could potentially help prolong the liquid fuels culture and mitigate the forthcoming effects of the shortage of transportation fuels is being sought The dynamics are now coming into place for the establishment of a synthetic fuels industry the processes for recovery of raw materials and processing options have to change to increase the efficiency of oil production and it is up to various levels of government not only to promote the establishment of such an industry but to recognise the need for available and variable technology This timely handbook is written to assist the reader in understanding the options that available for the production of synthetic fuel from biological sources Each chapter contains tables of the chemical and physical properties of the fuels and fuel sources It is essential that the properties of such materials be presented in order to assist the researcher to understand the nature of the feedstocks as well as the nature of the products If a product cannot be employed for its hope for use it is not a desirable product and must be changed accordingly Such plans can only be made when the properties of the original product are understood The fuels considered include conventional and unconventional fuel sources the production and properties of fuels from biomass crops wood domestic and industrial waste and landfill gas
