Q.1 Explain the following terms-

1. Total number of people - inhabiting an area, region or country.
2. Death rate- number of deaths per thousand persons in a year.
3. Birth rate- number of live births per thousand people.
4. population density- number of people living in an area of one square kilometre.
5. Population dynamics- branch of science- focusses - change in size and age composition- how, when and why the changes occur.
6. Population distribution- members of the population are dispersed- physically- specific area.
7. Overpopulation- condition- human population- more - natural resources.
8. Age composition- number of people in different age groups.
9. Sex ratio- number of females per male in the population.
10. Population pyramid- graphical representation of age- sex structure of a population.

Q.2 Answer the following questions.

1. fertile loamy soil- good agriculture and other activities. These areas- support- intensive agriculture- provide water- basic necessity.
2. When birth rate- higher than death rate- population in an area- increases- leading to extensive use of natural resources as well.
3. improvement in the standard nutrition, health care, education and standard of living- though much needs to be done.
4. Spatial distribution, size and density, age structure, birth rate and death rate.
5. Positive- new breakthrough in medical science and other aspects, availability of manpower.  
Negative- pressure on existing resources, shortage of basic necessities.
6. Positive- excess resources, little or no congestion.  
Negative- underutilised resources, lack of adequate manpower.

Q.3 Give Reasons

1. geographical factors like relief, climate, soil, water, urbanisation, political, social and cultural factors.
2. increased human population puts pressure on the existing natural resources- cultivable land, fresh water, fossil fuels, minerals- leads to- degradation of resources.
3. leads to lower birth rate- slows population growth- easier for a country's development. More educated workforce- less poverty- economic growth.
4. plains, slopes- densely populated than the mountains- such areas- favourable- agriculture, building, over establishment, industrialisation, transportation. Climate-

McComb, Benjamin Zuckerberg, David Vesely, Christopher Jordan, 2010-03-11 In the face of so many unprecedented changes in our environment the pressure is on scientists to lead the way toward a more sustainable future Written by a team of ecologists Monitoring Animal Populations and Their Habitats A Practitioner s Guide provides a framework that natural resource managers and researchers can use to design monitoring programs that will benefit future generations by distilling the information needed to make informed decisions In addition this text is valuable for undergraduate and graduate level courses that are focused on monitoring animal populations With the aid of more than 90 illustrations and a four page color insert this book offers practical guidance for the entire monitoring process from incorporating stakeholder input and data collection to data management analysis and reporting It establishes the basis for why what how where and when monitoring should be conducted describes how to analyze and interpret the data explains how to budget for monitoring efforts and discusses how to assemble reports of use in decision making The book takes a multi scaled and multi taxa approach focusing on monitoring vertebrate populations and upland habitats but the recommendations and suggestions presented are applicable to a variety of monitoring programs Lastly the book explores the future of monitoring techniques enabling researchers to better plan for the future of wildlife populations and their habitats Monitoring Animal Populations and Their Habitats A Practitioner s Guide furthers the goal of achieving a world in which biodiversity is allowed to evolve and flourish in the face of such uncertainties as climate change invasive species proliferation land use expansion and population growth

Urban Deer Havens Clark E. Adams, Cassandra LaFleur Villarreal, 2020-05-06 Urban Deer Havens consists of a thorough examination of selected cervid deer species that are known to inhabit urban communities in the United States The deer species that are included in this presentation consisted of white tailed *Odocoileus virginianus* Key deer *O v clavium* moose *Alces alces* elk *Cervus elaphus* mule *Odocoileus hemionus* and black tailed deer *O h columbianus* This book is the first attempt to examine the similarities and differences in those factors that allow the selected cervids to exist and thrive in urban

habitats This information has never been collected collated reviewed and published under one cover document Yet all five are known to inhabit urban communities within their geographic range The lack of information concerning several important examples of urban cervids in conjunction with a proliferation of information on white tailed deer only is an incomplete and biased presentation This book is the first comprehensive source of information on urban deer management which includes a broad assemblage of urban cervids The overall objective of this book is to provide a more holistic examination of urban cervids For example it examines the similarities and differences of the environmental impacts management strategies and human dimensions considerations concerning urban cervids in general and using specific examples Urban Deer Havens features four chapters that include Urban deer census techniques and population dynamics Comprehensive tables that review urban community deer management plans National and state wide estimates the five selected cervids Laws and regulations concerning urban deer Lethal and nonlethal management options for managing deer Steps for managing urban deer populations Examples of urban deer management efforts

**Diseases at the Wildlife - Livestock Interface** Joaquín Vicente, Kurt C. Vercauteren, Christian Gortázar, 2021-04-29 Shared diseases among wildlife livestock and humans often transboundary are relevant to public health and global economy as being highlighted currently relative to the global COVID19 pandemic Diseases at these interfaces also impact the conservation of biodiversity and must be considered when managing wildlife While wildlife and domestic livestock have coexisted in dynamic systems for thousands of years spillover disease risks are higher today than in the past due to global patterns of increasing close contact and interactions among wildlife livestock and humans in the context of complex diverse and numerous circumstances Multidisciplinary studies of animal interfaces especially those involving wildlife therefore must be brought to the forefront so that knowledge gaps can be realized and filled to inform managers and policy makers In the first part of the book authors illustrate and discuss ecological and epidemiological concepts related to the interfaces with a vision towards socio ecological system health In addition the history of past animal interfaces provides the necessary perspective to focus current questions better understand present situations and informs how we can best approach the future The second part discusses the myriad of similar and differing wildlife livestock interfaces found around the world from a regional point of view The third part focuses on how to assess the spatial and temporal overlap between livestock and wildlife and authors present new technical innovations about how inter transmissions between wild and domestic populations can be quantified An overview of main modeling approaches available to quantify multi host disease transmission at the wildlife livestock interface illustrated with specific case studies is also presented Finally the need for interdisciplinary approaches and a dedicated thematic field to approach the wildlife livestock interfaces and create opportunities to promote wildlife livestock coexistence is emphasized The concluding chapter presents perspectives and directions to better understanding disease dynamics at the wildlife livestock interface global change and implications for the future The changing distribution of interfaces ongoing human and environmental changes e g climate

warming changes in animal production systems etc and their likely impacts and consequences for the interfaces and disease transmission processes are all discussed
