The Hopeful Heretic WJ Selert, 2024-09-11 Why do peace loving religions so often cause instability conflict and violence The Hopeful Heretic explores the history and evolution of western institutional religion providing the context language and arguments free societies need to understand and inoculate themselves against resurgent religious fanaticism in the 21st Century Book I examines the invention of institutional religion as a social governance operating system built around the human need to understand our place in the Universe From pre historic nature based religions to structured polytheism to the main western institutional monotheistic religions Th Hopeful Heretic charts the history innovations key features and inherent defects of those systems demonstrating each is man made inherently divisive and prone to chronic instability and conflict Book II surveys the immense body of scientific knowledge accumulated since the questionable mythologies of our ancestors became generationally entrenched From Newtonian Physics to Quantum Mechanics Deep Field Astronomy and Emergent Intelligence the Hopeful Heretic argues that spirituality and meaning can be found without the need for blind faith by appreciating the scientific fact that life is a pre programmed feature of a sublimely beautiful Universal Operating System and that we may all be part of and contributing to a living Universal Being A fascinating tour through history religion politics and science

Painting the Maple Veronica Jane Strong-Boag, 1998 *Painting the Maple* explores the critical interplay of race and gender in shaping Canadian culture history politics and healthcare These interdisciplinary essays draw on feminist postcolonial and critical theory in a wide ranging discussion that encompasses both high and popular forms of culture the deliberation of policy and its execution and social movements as well as individual authors and texts The contributors who come from many fields establish connections among discourses of race gender and nation building that have conditioned the formation of Canada for more than one hundred years They analyze ways in which these elements have participated in and contributed to exclusionary practices and policies such as marginalization of women and racialized groups Together their essays paint a picture of a nation that privileges whiteness masculinity and Christianity This book gathers many insights on the construction of Canada hitherto scattered in the literature It will be of interest to feminist scholars and others concerned with issues of race and gender At times provocative *Painting the Maple* illuminates the challenges that lie ahead for all Canadians who aspire to create a better future in a reimagined nation

The Involvement of Systemic Homeostasis in Tumour Biology Wei-Lin Jin, Hongying Pan, Qian Wang, Gerhard Schmalz, 2023-10-13

Systemic homeostatic mechanisms include several aspects such as metabolic neuroendocrine immune and physiological homeostasis Irreversible damage or reversible imbalance of such homeostatic processes may initiate cancers by altering the regulation of the molecular machinery Systemic homeostasis related genes have been found to be intimately involved in oncological processes and in some instances have shown prognostic value Thus future gene targeting approaches for cancer should not only focus on classical cancer drivers but also address systemic homeostasis related genetic mechanisms Identification of systemic homeostasis related genes with diagnostic prognostic or therapeutic value can advance translational cancer research Increasing numbers of research studies have reported systemic homeostasis related genes relevance to various types of cancer For example cancer cells have been shown to activate a critical mechanism of oxygen homeostasis hypoxia inducible factors HIFs family genes in order to adapt to the tumor microenvironment and develop into a more aggressive phenotype In addition methylene tetrahydrofolate dehydrogenase MTHFD family genes are involved in mitochondrial one carbon metabolism which is essential for maintaining systemic metabolic homeostasis and have recently been found overexpressed in many cancers and have been correlated to poor survival outcomes The overexpression of transferrin family genes with iron transporting function has been linked with iron accumulation which is a known initiating factor in cancer Another example is Forkhead box O FOXO family genes which serve as a critical regulator of immune homeostasis and can regulate cancer immunity by negatively regulating the expression of immunosuppressive gene programmed death 1 ligand 1 PD L1 Apart from these examples other systemic homeostatic mechanisms such as glucose homeostasis energy homeostasis lipid homeostasis phosphate homeostasis cholesterol homeostasis and mineral homeostasis may also be implicated in cancer pathogenesis Although accruing research is focused on describing systemic homeostatic mechanisms in cancer biology several research questions remain unaddressed The utilization of recent analytic tools and bioinformatics as systems biology approaches has the potential to address these research gaps Therefore in this special issue we will collect articles focusing on the application of bioinformatics and systems biology based investigations of systemic homeostatic mechanisms in malignant diseases Both original research and review articles are welcomed however publications based on the analysis on only one database will not be accepted e g TCGA
