

XR-500

OPERATING GUIDE

GENERAL DESCRIPTION

The new XR-500 represents our latest effort to combine professional features previously found only in separate mixer / equalizer / power amp components into a single compact and rugged package. The design of the XR-500 utilizes the latest advances in semiconductor technology and the overall circuitry has been designed and optimized by use of the latest computer-aided design techniques. This unit's improved specifications have been made possible by a thorough and complete design effort resulting in all new circuitry from the input jack, through to the speaker output.

The XR-500 features five independent input channels and includes a separate "pre" monitor send, active shelving type high and low equalization, and a "post" effects send on **each** channel. Master level controls are provided for the main, monitor and reverb return. A full seven-band graphic equalizer has been built into the system and utilizes the most contemporary active filter circuitry available. Additional flexibility is provided by the XR-500's patch panel, enabling this versatile unit to be used in conjunction with an extremely wide range of auxiliary equipment.

The newly engineered 130-Watt power amplifier features our exclusive DDT® ("Distortion Detection Technique") compression circuitry that electronically senses the onset of clipping and automatically activates the compression circuit to maximize headroom and prevent clipping and distortion in the power amp. The use of this DDT® compression circuit effectively increases the apparent headroom available, thus maximizing every precious Watt of power available. This compression feature allows the XR-500 to quite effectively compete with units having considerably more RMS power.

The power amp of the XR-500 utilizes four high-voltage, high-speed T0-3 power devices bolted to a massive heatsink. The internal power supply consists of a very large power (mains) transformer featuring a grain oriented silicon steel core and a high degree of magnetic shielding to minimize extraneous hum fields. Silicon rectifiers connected in a full wave bridge feed power to large electrolytic filter banks and provide considerably more music power than the 130-Watt RMS power rating would indicate.

Overall, the XR-500 brings professional performance together in an extremely versatile and compact package, offering features and specifications formerly available only with separate components in a single portable package.

WARNING: To prevent electrical shock or fire hazard, do not expose this appliance to rain or moisture.
