REVIEW AND STUDY GUIDE

Competency 009

Learning Styles

The acronym "VARK" is used to describe four modalities of student learning that were described in a 1992 study by Neil D. Fleming and Colleen E. Mills. These different learning styles—visual, auditory, reading/writing, and kinesthetic—were identified after thousands of

Competency 009

Ways to Facilitate Student Learning

Connecting New Information And Ideas To Prior Knowledge

Activating prior knowledge means both asking from students what they already know and building initial knowledge that they need in order to access upcoming content.

This strategy has been found to be essential to teaching all of our students, both those who are proficient in English and those who are

Competency 001

Jean Piaget's Stages of Cognitive Development

Sensorimotor stage	0 to 2 years During the earliest stage of cognitive development, infants and toddlers acquire knowledge through sensory experiences and manipulating objects. A child's entire experience at the earliest period of this stage occurs through basic reflexes, senses, and motor responses. It is during the sensorimotor stage that children go through a period of dramatic growth and learning. As kids interact with their environment, they are continually making new discoveries about how the world works.
Preoperational stage	2 to 7 years Children become much more skilled at pretend play during this stage of development, yet continue to think very concretely about the world around them. At this stage, kids turn through pretend play but still struggle with logic and taking the point of view of other people. They also often struggle with understanding the idea of conservation. For example, a researcher might take a lump of clay, divide it into two equal pieces, and then give a child the choice between two pieces of clay to play with. One piece of clay is rolled into a compact ball while the other is stretched into a flat pancake shape. Since the flat shape looks larger, the preoperational child will likely choose that piece even though the two pieces are the same size.
Concrete operational stage	7 to 11 years While children are still very concrete and literal in their thinking at this point in development, they become much more adept at using logic. The abstractions of the previous stage begin to disappear as kids become better at thinking about how other people might view a situation. While thinking becomes much more logical during the concrete operational stage, it can also be very rigid. Kids at this point in development tend to struggle with abstract and hypothetical concepts.
Formal operational stage	12+ years The final stage of Piaget's theory involves an increase in logic, the ability to use deductive reasoning, and an understanding of abstract ideas. At this point, people become capable of seeing multiple potential solutions to problems and think more scientifically about the world around them.
