Background: Frequency distributions describe the distribution of a population. A sample

Prerequisite Knowledge: Students should know how to draw using the compass.

1. **Frequency distributions** summarize descriptive information about each individual sample or value. Frequency distributions allow us to compare each sample with the distribution of all the samples that they are from. The following graph illustrates the frequency distribution of test results, without grouping.

2. How would you describe the shape of this distribution?

Answer: It shows that the shape of the test scores is not **symmetric** (neither unimodal nor bimodal).

3. In the above graph on right, sketch what you think the frequency distribution might look like if the scores were all normally distributed. Label the axes.
