Esquinas,2022-02-01 This book uses real world clinical case analyses of hot topics to provide insights into noninvasive mechanical ventilation NIV Written by leading international teachers and experts it features

a selection of major controversial topics in clinical practice and demonstrates how these cases can be used to teach about NIV. It then presents a discussion of the topics in various scenarios: anesthesiology, critical care, emergency, pneumology, and sleep medicine, as well. The chapters allow readers to develop a case-by-case understanding of NIV in acute and chronic respiratory disorders and perioperative and intensive care patients, also thanks to Electronic Supplementary Materials. Lastly, the authors summarize five key points and recommendations. This book is an attractive resource also for universities, educational seminars, national and international postgraduate courses, and hot topics sessions at national international congresses.

*Mosby's Respiratory Care Equipment* Jimmy M. Cairo, Susan P. Pilbeam, 1999. The leading resource for more than two decades, this new edition of MOSBY'S RESPIRATORY CARE EQUIPMENT, formerly authored by Stephen P. McPherson, features a new in-depth clinically oriented focus with thorough explanations of how equipment is used by respiratory care practitioners. New chapters include noninvasive assessment of physiologic functioning, blood gas analysis, principles of infection control, and sleep diagnostics. In addition, new content covers incentive spirometry, IPPB devices, and chest physiotherapy. Features like the how-to focus of the mechanical ventilator discussion, Clinical Practical Guideline excerpts, Decision Making, and Problem Solving boxes, and internet resources set this book apart from the rest. The new art, a new focus, new features, and a new author team make this the most sought-after edition ever. Over 650 300 new line drawings and photographs to help students learn faster and easier. Full-page line drawings of ventilator control panels allow for easy identification of controls. Review questions at the end of each chapter include multiple-choice questions modeled after those on the NBRC exam, as well as critical thinking questions to prepare the student to practice as a Respiratory Therapist. All key terms are listed in a glossary at the end of the book to help students learn easier.

*Acute Resuscitation and Crisis Management* David Neilipovitz, 2005. While the management of critically ill patients has traditionally been an undeveloped area of medicine, recent advances in drugs, surgical techniques, and medical equipment now allow patients to survive illnesses and disorders that previously were uniformly fatal. Unfortunately, the knowledge and techniques that are required to do this are not traditionally taught in medical school. Thus, medical errors in this population group are not uncommon and are more likely to have adverse, often fatal, consequences. In 2001, physicians responsible for the care of the critically ill were introduced to a new program providing them with the tools to significantly decrease the number and severity of medical errors: the Acute Critical Events Simulation (ACES) Program, an intensive and highly interactive course on the acute resuscitation of critically ill patients and the management of crisis situations. This book is a compendium to the ACES Program, containing its important background information and reference material while serving as an independent reference source for physicians and other health care professionals. With contributions by recognized physicians from across Canada, it presents the specifics of acute resuscitation in the context of crisis resource management and teaches readers life-saving resuscitation skills in a way that allows them to use their medical training more effectively. With increasing doctor shortages,

forcing more physicians to manage acutely ill patients this book will aid physicians looking for a simple yet useful text to help them manage critically ill patients in connection with the ACES Program While the intended audience for the course is primarily emergency room doctors family physicians and senior medical residents this collection is also applicable to nurses paramedics respiratory therapists and medical students
