The second generation Range Rover was arguably Land Rover's first model designed as a luxury vehicle. It was a major leap for the company but a very successful one as well. Despite controversy over its looks and some initial teething problems, it became a worthy successor to the much-loved original Range Rover. *The Complete Story* draws on the memories of designers and engineers as well as on a wide variety of factory sources to provide the most authoritative history of the model yet. The book covers the full development history, the changes during eight years of production, Range Rovers for the North American market, full technical specifications, and finally Range Rovers and the emergency services. A companion volume to the author's *Range Rover First Generation The Complete Story* (Crowood 2018). **Kenya Gazette**, 1998-10-02

The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy, as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week. *Title 49 - Transportation* (Federal Register, 2007-10). *The Code of Federal Regulations of the United States of America*, 1999. The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government. *Transport, Climate Change and the City* (Robin Hickman, David Banister, 2014-02-05). Sustainable mobility has long been sought after in cities around the world, particularly in industrialised countries, but also increasingly in the emerging cities in Asia. Progress, however, appears difficult to make as the private car, still largely fuelled by petrol or diesel, remains the mainstream mode of use. Transport is the key sector where carbon dioxide (CO₂) emissions seem difficult to reduce. *Transport, Climate Change and the City* seeks to develop achievable and low transport CO₂ emission futures in a range of international case studies, including in London, Oxfordshire, Delhi, Jinan, and Auckland. The aim is that the scenarios as developed and the consideration of implementation and governance issues can help us plan for and achieve attractive future travel behaviours at the city level. The alternative is to continue with only incremental progress against CO₂ reduction targets, to sleepwalk into climate change difficulties, oil scarcity, a poor quality of life, and to continue with the high traffic casualty figures. The topic is thus critical with transport viewed as central to the achievement of the sustainable city and reduced CO₂ emissions.
